SOURCE: E.O.C.D.C. Survey, 1975

There was a high response to households with an annual income of \$2,000 - \$3,999. On a cross tabulation with housing costs it was found that the median housing cost was about \$100.00 per month for the same household with that figure running higher in the town of Wallowa. Such figures confirm the fact that the lower-income households spend considerably more for shelter than those on middle or upper-incomes.
